Wonderful New A Wonderful New Medical Book, written copy may be had free ERIE MEDICAL CO.

We give a valuable book free to every business man who will pay of mailing. The book is "Selections from Good Advertising," by Charles Austates. It contains 100 large pages and its price is 50 cents. It was published der to give business men a sample of what is contained in Mr Bates great 700-x-lume. "Good Advertising" price \$5,00. Each copy of "Selections" contains agon good for 50 cents on the purchase price of "Good Advertising." The counand \$1,50 will buy the \$5.00 book.

## Absolutely Free

If you will send 10 cents to pay the cost of mailing. We want every business man in the world to have a copy. We are willing to lose moneyon it, bacause we believe no not of ten of those who get it will want and buy the complete 700 page volume. The offer is to business men only; all others will have to pay full price,

"Selections" contains twelve chapters and 100 pages. "Good Advertising" contains 700 pages, divided into 150 chapters treating of every phase of the advertising question. It tells how much to spen it where to spend it; how to display your ads; how to write them; how to make them pay; how to illustrate them; how to save money on them. It covers every point in every-day advertising in every line of business. It tells all about type and printing. It gives good, practical aid.

# Charles Austin Bates,

the leading authority on advertising. Mr Bates is the most successful advertising man in America today. In three short years, during a period of business depression, he has built up the greatest business in his line in the world. He is a "speciallst in advertising" He makes plans, gives advice, writes and lilustrates advertising. Some of the largest advertisers in the world are his clients. A single one of them has paid him over \$8,000 this year for writing the right sort of advertising matter. Thous ands of advertisers hig and little, have been benefited by his knowledge and experience, and have told him their trials and tribulations; their successes and failures. They have told him what paid and what did not.

Mr B stes has been all his life in acquiring the knowledge of absolute business facts that he has put into this big book, We have bound together in its 500 pages knowledge, the proper use of which brings Mr Bates his net income of over \$50,000 a year.

All of this is yours for \$5,00,000 a year.

All of this is yours for \$5,00,000 a year.

# "Good Advertising"

is the only book of its kind. There is nothing else like it. We have sold over 3000 copies since February 1st, 18%, every copy with the understanding that it could be returned if unsatisfactory, and not a single book has come back. On the contrary, we have received nearly

# 1000 Testimonials

from business men who have found the book of value and benefit to them.

It has been endorsed by such eminent, brainy and successful men as:

ROBERT C. OGDEN,

Managing Partner, firm of John Wanamaker,

GEO. P. ROWELL,

Publisher American Newspaper Directory and Printers Ink, and the best known advertising agent in America.

MANLY M. GILLAM,

for many years John Wanamaker's \$10,000 advertising manager, whose wisdom and shrewdness in advertising matters is known in every state in the union.

DR. R. V. PIERCE,

President World's Dispensary Medical Association, Buffalo, N. Y., whose annual expenditure for advertising is not less than half a million dollars, and who has made a fortune of several millions by successfully advertising good medicines,

WM. DEAN HOWELLS

found "Good Advertising" of sufficient interest to give it a notice,occupying nearly a whole page of Harper's Weekly,

CHARLES A. DANA,

the wor'd famous editor of the New York Sun, says: "There should be profit to all intelligent advertisers who buy this book.
One man says the look has been worth \$1,000 to him; another that it is worth \$5,000 a page; another that he wouldn't take 550 for it; another that its worth \$500?

\*\*\*\*\*\*\*\*\*\*\*

Remember that it pages of selections from this great book may be had, nearly cound in pager covers, Absolutely Free, by business men who will send a silver dime, or forents in samps to repay for mailing it. Anyone not in business for hims if will have to pay full price. In cents.

This offer is for a limited time only. It is being widely advertised. If your letter reaches us after all the "Selections" are gone, we will return the money.

13 Beekman Street, New York.

A NEW YOSEMITE.

Travelers Make a Great Discovery in Montana.

Scenery in the Northwestern Part of the State Grander Than That of the National Park of the Yellowstone.

"We have discovered a second and greater Yosemite valley and a grande) National park than the Yellowstone, said Prof. L. W. Chaney, of Carleton college, Northfield, Minn., in telling about his recent visit to Avalanche basin, which he discovered last year in the northwestern corner of Montana.

A year ago Prof. Chaney and some other scientists, one of them a lecturer on the natural scenery of the west, found in the western part of Montana by man-red or white. They heard ests that crown the mountains.

in the vicinity of this lake that a year | near the tide-water step that runs along before, in following up the slopes of the base of the Alleghanies, while Rich Brown peak, north of Lake McDonald. mond is directly on the step, with 50, with the idea that glaciers were to be | 000 horse-power in sight. In fact, few found, he had seen not only a glacier, if any, of our great cities are beyond the but also a beautiful valley and a lake reach, if we may proceed upon the as new to the world.

The scientists found the basin and They had no instruments and were unable to get any measurements.

They determined to return at the earliest opportunity. This they have now done, armed with all needed instruments, to make a thorough investigation. In the meantime others have been to Avalanche basin, and the trail from Kalispel has been so chopped out that a woman-Mrs. J. H. Edwards, of may be included in transportation, powthat place-has made the perilous trip. have seen the basin have been worldwide travelers, and declare that there

is nothing in the Swiss mountains or in wonderful transformation, and that the most famed resorts of Europe that within the cognizance of the present can compare with it. The valley is a scenic gem set in a frame of cloudouching peaks, and is unrivaled in its erally abolished, light and power being brilliancy and natural interest, but owing to the purity of the atmosphere and the consequent impossibility of getting distance in the view it is impossible to make a photograph that will show adequately the beauties of the Lake McDonald is located in the

orthwestern portion of Montana, about 25 miles from the little mountain town of Kalispel. It is 16 miles in length four or five miles wide, at an altitude of about 3,000 feet, and as clear as crystal

Its mirroring effect is more sharply defined than is that of the famous Mirror lake of California, and it reflects the forests of the surrounding mountain slopes so clearly that the narrow. sharply-defined beach of smoothly-polshed gravel is the only indication of where the reflections begin and the forest ends. From Lake McDonald the trail through the mountain extends to the northward about 15 miles, up the rocky steeps, and at the last cuts through a gorge of crimson jasper quartzite, in which are many deep cas-

Suddenly, and without warning, one merges on the shores of Avalanche ake and into a valley of the most sub lime and impressive grandeur. way has been hard and the climbing difficult, but the end repays it all.

The basin is more than 800 feet high er than Lake McDonald, and the sur counding rocks tower in almost a per pendicular wall for from 3,000 to 6,00 feet higher. Rising here and ther above the general level of the wall o rock are various peaks. The discover ers have named one the Matterhorn and its altitude is 4,000 feet above th level of the lake; another has been called the Cathedral Dome, from its re semblance to the dome of St. Peter'. as seen from the campagni, and it rise about 4,500 feet; a third has been called the Sphinx, and a fourth the Castle The last rise to a height of over 10,00 feet above the sea. Down the sides o these walls easeades fall at height carving from thousands to about 40% feet, breaking in foam on the lake be ow, and filling the valley with the roa of a Ningara.

The basin is nearly two miles lor and nearly the same in width. In it. center is Avalanche lake, three-fourths of a mile in length and half a mile wide Its waters when seen from the shorare of a turquoise blue, but when looked down upon they are as clear as rystal, even more so than those of Lake Superior, and the rainbow and mountain trout lying in their depths

The upper end of the basin is about two miles east of the entrance, and plunging down the precipitons rocks are some dozen mountain streams forming a series of beautiful cascade and entarnets. All are fed from the snows of the mountains, and they are arge and small according as the sun has had an opportunity to melt the snows. Avalanches have cut their way down the slopes and have left their gashes on the surrounding cliffs. North from Avalanche basin to th

British line the scenery is of the grandest. It rivals if it does not surpas that to be found in the Selkirks and i the Canadian Rockies. Glaciers abound, and about 30 miles north of Avalanche is one of the greatest to be found in America. - N. V. Son.

A Puzzle. She-There is one thing about polities I could never understand. He - What is that?

She-Why is it that in making up tickets they always use a slate; Wouldn't a sheet of paper, and a pen or peneil be more convenient?-Brooklyn

You can carry the little vial of Dr. Pierce's Pleasant Pellets right in the vest-pocket and it will not make even a little lump. They cure constipation. One "Pellet" is a laxative; two a mild cathartic. One taken after dinner will gans themselves. That is where they differ from all other pills. That is what makes them better than all other Depot Agent. General Agent. 

pills. You don't become a slave to their use as with other pills, because their help lasts. Once used, they are always in favor.

VAST WATER POWER.

Utilization of Great Natural Forces in This Country.

Possibility of Bringing Into Service the Tremendous Energy of Lakes, Rivers and Waterfalls for Industrial Purposes.

Chicago has it in contemplation to light 700 miles of streets with power obtained from its great drainage canal. when the waters of Lake Michigan are poured through it into the Illinois river; New York is looking forward to the day when power may be brought down from Niagara or from the Catskills: a country which had seldom been seen | Boston is within the sphere of the Merrimack falls; Washington can get at ague rumors of a glacier valley, and abundant supply of power to light cut their way from the then newly- every street and public building from found Lake McDonald through the for | the Great falls of the Potomac, where 100,000 horse-power is running to waste They were told by the original settler | Baltimore and Philadelphia are situated sumption of Tesla (who says that the power of Niagara may be carried ultilake, and, by reason of the constant mately over any part of the American

power, and the ability to use it, must result in a great revolution in economic conditions, far greater than that brought about by the introduction of steam. This revolution will be felt in a greatly enhanced production, with cheaper cost to the consumer, together with a large increase and general extension of the comforts of life, such as er for domestic purposes, light and heat Some of the dozen or more men who including fuel, the cost of which will be considerably reduced. In the cities there will be, one may well believe, a generation. The use of steam in the thousands of isolated plants will be gen delivered through the agency of electricity from central plants situated per haps 100 or 200 miles distant. (Who lares set the limit?) The dangers of the steam boiler and the furnace in crowded buildings and beneath the side walks of the city, and the discomforts of the wholesale consumption of coal will be done away with for a cheaper, a safer and a healthier system.

Nor is it to be inferred that because ve have water power we shall have no more steam and coal. Not at all. But there will be a more rational and ecoiomical consumption of coal, necesitated by the cheapness of the power cenerated by the turbine wheel and ransmitted from the dynamo to the notor. It will no longer pay to mine oal and ship it hundreds of miles to he cities by our present cumbersome and wasteful methods (losing 30 to 5 per cent.) when its essence can be etter sent by wire. It requires no spirit of prophecy to foretell that in the beginning of the next century the coal will be burned at the mine shaft, and ery ton brought to the surface will utilized. The power-plant located t the mine shaft, burning the "run of he mine," either as coal or in the form of gas, can better compete with the ower-plant at the falls than can the urnace and boiler in the city. There ill be no more black hills of culm at he mines, disfiguring the face of the ountry and choking the streams, and to ashes and cinders to worry the city onsumer. The copper wire in the un lerground conduit will carry the en rgy safely and economically to the point of consumption, and the railroad r factory engineer, or the housewife in the home, need but to press a button to send the train at 100 miles an hour to set the spindles or lathes in moion; to heat the house, or to cook the

The social phases inevitably accompanying this mechanical revolution may be far more beneficial than the eco comical gains, great as they will doubt ess be. The saving to the housekeen er in time and labor will make her new woman indeed, and the general in troduction of the electric stove may reasonably be expected to cause a decided advance in the health and hapniness of the race.

Whether the distribution of power from the falls and the mines will al ways remain in the hands of corpora ions of capitalists is a problem that the future must decide. There is no delying, however, that the object lesson of the universal public use of natural forces will be a powerful one from : collectivist point of view, and should are state (as Wyoming or Utah, for ex ample) undertake the distribution of electric power, as cities distribute ga and water, the experiment would b watched with the greatest interest by the whole civilized world .- John T Bramhall, in Leslie's Weekly.

Military Bear Hunting.

Russian soldiers in Siberia are no only encouraged to exercise their man i.d ardor on big game, but are actuall led out in squads to take part in the hunt. On a recent occasion a local police inspector joined in the hunt, and got two of the soldier beaters to act as his body-guard. When the bear can merrily romping toward him over the snow the inspector got flurried, misses with both barrels, flung down his gur and buried his head in the snow, seek ing to burrow out of sight. The bear came on in a great fury. Two of the soldiers waited until he came to close quarters and turned him back with volley. They then charged with fixed bayonets and finished him off in tru military style. They have been re warded for their presence of mind i saving the life of the guardian of th peace by having their photograph hung in their headquarters and being each presented with one ruble,-Chi eago News.
